OMNI REPORT

September 2025

METHODOLOGY

The survey was conducted with 1,500 Canadians from August 28 to September 2, 2025. A random sample of panelists were invited to complete the survey from a set of partner panels based on the Lucid exchange platform. These partners are typically double opt-in survey panels, blended to manage out potential skews in the data from a single source.

The margin of error for a comparable probability-based random sample of the same size is +/- 2.53%, 19 times out of 20.

The data were weighted according to census data to ensure that the sample matched Canada's population according to age, gender, and region. Totals may not add up to 100 due to rounding

Knowing that the Trump administration has decided to eliminate U.S. regulations aimed at making cars more fuel-efficient and cleaner, do you think Canada should:

As Trump eliminates regulations to make cars cleaner and more fuel-efficient, Canadians overwhelmingly support maintaining Canada's own standards to protect the environment and efficiency.
